

# Quality Assurance Engineer

**Number of Posts:** 1

**Contract Type:** Permanent

## Job description

We are looking for a Quality Assurance (QA) engineer to develop and execute exploratory tests to ensure the quality of our three products. In this role, you would be testing new features or functionality, managing test environments, as well as report, document and communicate with the team and your wider stakeholders

The QA technician role plays an important part in our company's product development process. Our ideal candidate will be responsible for conducting tests before product launches to ensure software runs smoothly

and meets client needs, while being cost-effective. If you love providing end-to-end solutions to software quality problems, we'd like to meet you.

Roughly, you can expect the following spread of tasks:

40% regression testing

30% new features/functional testing

10% managing testing environments

20% reporting, documenting and communicating with the team and wider stakeholder group

## Requirements

Hands-on knowledge and experience with the following:

- Selenium, Postman or SQL Working experience
- Agile Working experience
- SPA (Single Page Application) testing Working

## Training provided

No

## Any assistance with accommodation/relocation
